

Reaching key populations

Duncan Blair
Director, Public Health Initiatives

IAS-ILF Key Populations Roundtable
Seattle, 24th February 2015

Global recommendations are clear

New recommendations (2013)

In generalized HIV epidemics, community-based HIV testing and counselling with linkage to prevention, care and treatment services is recommended, in addition to provider-initiated testing and counselling (*strong recommendation, low-quality evidence*).

In all HIV epidemic settings, community-based HIV testing and counselling for key populations, with linkage to prevention, care and treatment services is recommended, in addition to provider-initiated testing and counselling (*strong recommendation, low-quality evidence*).

“Community-based testing approaches may reach people with HIV earlier in the course of HIV disease than provider-initiated testing and counselling, as well as reaching populations that may not normally attend health services.”

Consolidated ARV Guidelines, WHO, 2013
