Webinar (please see log in details on page 2)

With the availability of new evidence, and progress in the development of new drugs (including paediatric formulations), the Paediatric ARV Drug Optimization (PADO) group recently reviewed its [list of priority paediatric ARV formulations](#). The review focused on implementation, taking into consideration alignment with drug optimization efforts for adults through the Conference on Drug Optimization (CADO) 3 meeting, and in preparation for the upcoming WHO ART guidelines review (planned for Q2 2018).

In collaboration with the WHO and CHAI, the ILF invites you to attend a webinar to report back on the PADO 3 review. This interactive session will cover the latest discussions around the list of priority paediatric ARV formulations.

Please join us for this webinar.
