COVID-19 and HIV: Lessons in Wuhan

Ke Liang MD PHD

Infectious Disease Department
Zhongnan Hospital of Wuhan University

Fever outpatient in wee hours

Lockdown of Wuhan

Difficult situations for HIV/AIDS patients

- Nearly all hospitals in Wuhan were dealing with only COVID-19
- ARVs refill
- Pulmonary infection was misdiagnosed with COVID-19

- The government and CDC responded with special measures: people could refill ARVs at the nearest CDC

Doctors delivered ARVs to patients directly

Delivered ARVs by express

Pulmonary infection was misdiagnosed with COVID-19
