ONE CHILD ONE LIFE

Lentera Anak Pelangi

Program Effectiveness in Supporting Children & Adolescents Living with HIV in Indonesia (2009-2022)

LAP Program: 5 Pillars

OUTCOMES

+ LONG TERM IMPACTS

1. Home Visit & Care Support

Monitor condition of family & child, monitor ART & opportunistic illnesses, educate & counseling

Increase families' care, knowledge & attitudes toward HIV and adherence to treatment

2. Nutrition Support

Provide baby formula, nutritions & vitamins, nutrition for special needs

Improve nutrition and health

3. Medical & Hospital Support

Accompany children during medical check-up, monitor access to ART, VL, & other tests, support hospitalized children & families

Improve managed care & adherence to treatment

4. Psychosocial Support & Life Skill Education

Provide counseling, facilitate character building group sessions for children, peer support groups for caregivers. Facilitate support group & vocational training programs for youth (16-21)

Improve psychosocial well being for families, CHLHIV, ALHIV

5. Capacity Building & Advocacy

Increase awareness & knowledge in communities, schools, and others

Educate and increase general populations awareness and attitudes towards PLHIV

Prevent children from being neglected or/and abused

Improve quality of lives

Reduce morbidity & mortality

Reduce horizontal and vertical transmission

Beneficiaries

Orphan and Vulnerable Children

LAP Monitoring Dashboard

- Monthly, quarterly, annual data records
- Monthly BMI: **A,B,C**
- Monthly Adherence to ARV (case manager + caregiver report): **A,B,C,F, Stop**
- ARV regimen status: **LINI 1, LINI 2**
- HIV-related diseases categories; **mild, moderate, severe** (based on CDC Pediatric HIV-RElated Diseases Categorization)
- Annual/Biannual Lab Test: VL, CD4, HB (and other indicators)

Longitudinal data analysis enables LAP to monitor and provide intervention recommendations

Psychosocial Support & Life Skill Education

- Character building group sessions for children - Sekolah LAP
- Support group for caregiver
- Support for disclosure of HIV status
- Support group & vocational training programs for youth
- Psychosocial assessment for adolescents
- Counseling

Capacity Building & Advocacy

Increase awareness & knowledge in communities, schools, and others

Key Takeaways:

- Most CLHIV & ALHIV are orphans and vulnerable children. They need additional care and support network that can monitor and motivate them to adhere to the HIV care and treatment.
- LAP's home visit and hospital support, as well as psychosocial support programs are crucial in building caring and supportive HIV communities. Especially for ALHIV who often feels displaced and alone.
- The availability of data and data analytics enable LAP to monitor, recommend interventions, and act faster based on the medical and psychosocial needs of our beneficiaries.
- LAP cannot do this alone. We need the cooperation of families/caregivers and collaboration from governments, International HIV-AIDS foundations, and local HIV stakeholders to build comprehensive care programs for CLHIV in Indonesia.
- LAP programs, system, and tools are available to be shared and can be a model for other HIV organizations in Indonesia. Let's grow together.
